The Commitment to Development Index (CDI) ranks 27 of the world’s richest countries based on their dedication to policies that benefit poor nations. Looking beyond standard comparisons of foreign aid flows, the CDI measures national policies in seven areas that are important to developing countries: aid, trade, finance, migration, environment, security, and technology. This report reviews the Netherlands’ performance on the 2013 CDI. For more details, visit cgdev.org/cdi.

Netherlands’ 2013 CDI Performance

- Overall rank 2013: 5
- Overall score 2013: 5.9
- Change since 2003: -1.1
  (using 2013 methodology)

The Netherlands ranks 5th overall in 2013. The Netherlands scores above average in aid and trade policies. It gives a large amount of aid as a share of its income, and the quality of its aid is high. The Netherlands also has policies that promote trade through relatively low barriers to exports and limited impediments to importation from developing countries. It scores below average on the security and migration components, due to arms exports to poor and undemocratic countries, and small share of students from developing countries. The Netherlands’ technology component score is driven down by intellectual property policies that restrict the flow of innovations to developing countries. The Netherlands also has relatively high rates of greenhouse gas emissions and fossil fuel production per capita, and is rather negligent to identify bribery and corrupt practices.

www.cgdev.org/cdi
Aid

Aid quality is just as important as aid quantity, so the CDI measures gross aid as a share of GDP adjusted for various quality factors: it subtracts debt service, penalizes “tied” aid that makes recipients spend aid only on donor goods and services, rewards aid to poor but relatively well-governed recipients, and penalizes overloading poor governments with many small projects.

Score: 9.7  
Rank: 5

Strengths
- High net aid volume as a share of the economy (0.77%; rank: 5)
- Large share of aid to poor and better-governed recipients (selectivity rank: 7)
- Large amount of private charitable giving attributable to tax policy (0.01% of GDP; rank 10)
- Prevents project proliferation; large average project size (rank: 10)

Trade

International trade has been a force for economic development for centuries. The CDI measures trade barriers in rich countries against exports from developing countries. It also penalizes costly importation processes and restrictions against purchasing services from foreigners.

Score: 5.9  
Rank: 5

Strengths
- As a member state of the European Union, the Netherlands imposes low tariffs on agricultural products including wheat, dairy, some meats, textiles, and apparel
- Low agricultural subsidies (equivalent to a tariff worth 11% of the value of imports; rank: 6)
- Few documents required for importation (6 documents; rank: 3)
- Relatively low cost to import a shipping container ($895 per container; rank: 9)
- Few limitations on the importation of services (Services Trade Restrictions Index score: 12; rank: 3)

Finance

Rich-country investment in poorer countries can transfer technologies, upgrade management, and create jobs. Conversely, policies that permit financial secrecy of companies and banks can facilitate illicit activities and financial flows abroad. The CDI rewards policies that support healthy investment in developing countries and promote transparency in financial transactions at home.

Score: 5.0  
Rank: 16

Strengths
- Political risk insurance agency provides wide coverage and screens potential projects for violations of human, labor, and environmental rights
- Active participation and leadership in extractive industries transparency initiatives such as the Extractive Industries Transparency Initiative (EITI) and the Kimberley Process on blood diamonds
- Provides assistance to companies looking for investment opportunities in developing countries

Weaknesses
- Negligence in identifying bribery and corrupt practices

Migration

The movement of people from poor to rich countries provides unskilled immigrants with jobs, income, and knowledge. This increases the flow of money sent home by migrants abroad and the transfer of skills when the migrants return.

Score: 4.2  
Rank: 19

Strengths
- Bears large share of the burden of refugees during humanitarian crises (rank: 11)

Weaknesses
- Small share of foreign students from developing countries (31.9%; rank: 23)
- Small number of immigrants from developing countries entering the Netherlands (rank by share of population: 17)
Environment
Rich countries use a disproportionate amount of scarce resources, and poor countries are most vulnerable to global warming and ecological deterioration, so the CDI measures the impact of policies on the global climate, fisheries, and biodiversity.

Score: 6.9  
Rank: 13

Strengths
- High gas taxes ($1.27 per liter; rank: 7)
- Excellent compliance with mandatory reporting requirements under multilateral environmental agreements relating to biodiversity (rank: 5)

Weaknesses
- High greenhouse gas emissions rate per capita (19.6 tons of carbon dioxide equivalent; rank: 21)
- High fossil fuel production rate per capita (7.7 tons of carbon dioxide equivalent; rank: 21)

Technology
Rich countries contribute to development through the creation and dissemination of new technologies. The CDI captures this by measuring government support for R&D and penalizing strong intellectual property rights regimes that limit the dissemination of new technologies to poor countries.

Score: 5.2  
Rank: 12

Strengths
- Significant government support for R&D (rank: 10)
- Provides patent exceptions for research purposes

Weaknesses
- Allows patents on plant and animal varieties
- Pushes to extend intellectual property rights in bilateral trade treaties (“TRIPS Plus” measures) that restrict the flow of innovations to developing countries
- Offers patent-like proprietary rights to developers of data compilations, including those assembled from data in the public domain
- Does not force patent holders to license to meet social needs

Security
Since security is a prerequisite for development, the CDI rewards contributions to internationally sanctioned peacekeeping operations and forcible humanitarian interventions, military protection of global sea lanes, and participation in international security treaties. It also penalizes arms exports to poor and undemocratic governments.

Score: 4.2  
Rank: 19

Strengths
- Positions naval fleet to protect sea lanes vital for international trade (rank: 2)
- Relatively large contribution to the UN Peacekeeping Operations budget (rank by share of GDP: 6)
- Participates in major international security treaties and regimes

Weaknesses
- High level of arms exports to poor and undemocratic governments (rank by share of GDP: 24)

The above table lists ranks for each of the 27 CDI countries across seven policy areas. The final column shows the change in each country’s overall rank since 2012 (using 2013 methodology).

### About the CDI

The Commitment to Development Index has been compiled each year since 2003 by the Center for Global Development (CGD), an independent think tank that works to reduce global poverty and inequality through rigorous research and active engagement with the policy community. CGD Europe director and senior fellow Owen Barder directs the Index, building on the previous work of CGD former senior fellow David Roodman. Petra Krylova is the CDI coordinator. Collaborators have included William R. Cline on trade; Theodore H. Moran and Petr Janský on finance; Jeanne Batalova, Kimberly A. Hamilton, and Elizabeth Grieco on migration; Amy Cassara and Daniel Prager on environment; Michael E. O’Hanlon, Adriana Lins de Albuquerque, Mark Stoker, and Jason Alderwick on security; and Keith Maskus and Walter Park on technology. The Index is supported by the CDI Consortium.
